

# The High Tech

Lighting, more space and fresh water—all now available in an upscale, self contained restroom!

The Mr. John High Tech restroom is a technologically advanced unit powered by solar panels which allow it to operate without electrical hookups. The High Tech also includes space saving fresh water compartments hidden within the design, eliminating the use of an outside power source. These features are not only environmentally friendly, but also allow you to provide the comforts of home almost anywhere, even when there are no connections to water and electricity.

The spacious interior of the Mr. John High Tech restroom boasts 30 percent more floor space than other temporary restrooms. Fresh water flows in both the sink and toilet and sanitary foot pedals provide convenient, hands free use. The vanity area includes a sink, mirror, soap and paper towel dispensers, wastebasket and shelf where guests can safely and conveniently place their personal items. Finally, overhead lighting cuts through the darkness to provide better visibility and enhanced safety.

The sleek design and advanced features of the Mr. John High Tech restroom make it a perfect fit for even the most upscale events.
