

The Steri-Wash

Steri-Wash contains a waterless degerming gel that provides antiseptic hand sanitizing capability in situations where it is not feasible to wash with soap and water. It meets OSHA's blood borne pathogens standard. Kills 99.9% of most disease causing organisms including salmonella, e. coli, streptococcus, staphylococcus, listeria, herpes simplex type 1 influenza and many others within 15 seconds of contact.

The Steri-Wash system provides a rapid reduction of microbial contamination on the skin, yet is formulated for exceptional mildness so it can be used all day long, over and over. The unit is perfect for use with our Standard temporary restroom or any where extra safety and cleanliness is needed.

Mr. John's 32 ounce capacity Steri-Wash system accommodates hundreds of hand washings per day. It is delivered to your site, set up and ready for use.

> ANTISEPTIC HAND SANITIZER

> Features

- Ready for use - nothing to add, nothing to mix
- Compact - fits any where and easily mounts to any hard surface
- Completely self contained - no electricity or water hook ups needed
- For use without towels - no litter
