

Porta-Rain Shower

Pool-side, ocean-side or anywhere, the Mr. John Porta-Rain Shower brings cleanliness to a new level of convenience.

The Porta-Rain is a portable, self contained outdoor shower facility offering a cascade of fresh water in a private enclosure. The unit features a roomy interior with a grated floor for drainage, front door lock and outside occupancy indicator. Two clothing hooks are protected from splashing water by an interior curtain. The Fresh Water system is activated by a ball valve and dispenses 2.5 gallons / 9.5 liters of water per minute.

The only hook up necessary for operation is a standard garden hose to provide fresh water. The unit also features a 2" discharge pipe which may be drained to the ground or connected to a Mr. John 250 gallon wastewater holding tank or other disposal system (local regulations vary).

> PORTABLE SHOWER STALL
